Naticol®, the obvious solution

- Contains fish collagen peptides, including dipeptides and tripeptides, originating mainly from type I collagen
- Produced in Europe from high quality fish skins
- A natural ingredient with high purity
- Naticol® has unique organoleptic advantages and enhanced biological activity due to the specific enzymatic hydrolysis process
- Patented collagen

Scientific Evidences

Regular supplementation of Naticol® has showed many benefits for several body functions. Numerous scientific studies show that Naticol® helps to maintain skin beauty and prevent early signs of skin aging, as well as promoting joint well-being, helping to maintain mobility and improving intestinal comfort. Our scientific studies are published and details are available on request.

naticol®

The Fish Collagen Peptides

Naticol® prevents early signs of skin aging

Nowadays, consumers understand more than ever the impact of their diet on their skin, hair and nails. The increasingly obvious link between the inside and outside of the body has given rise to nutricosmetics. Thanks to its beauty benefits, collagen has become a leading nutricosmetic ingredient.

Through the results of several scientific studies, Naticol® collagen peptides show their effectiveness at increasing collagen synthesis and preventing early signs of skin aging by reducing the appearance of wrinkles and improving skin firmness & elasticity.

Naticol® promotes joint comfort

Comfortable joints play a key role in maintaining a good quality of life. It is therefore essential to take care of them. Collagen plays an important role ensuring the maintenance of cartilage. Its reduction can lead to wear and tear on the joints, which impacts mobility. Therefore, it is essential to compensate for a lack of collagen through supplementation.

Naticol® provides the amino acids and peptides that make up the collagen present in joint tissue. Several clinical studies show its efficacy for improving joint comfort and promoting joint health.

Naticol® helps with active aging

With the general increase in life expectancy, healthy aging is one of the main concerns for consumers. People seek to slow down the aging of their joints and skin. Our marine collagen helps to manage aging on various levels. First of all, Naticol®, as a source of protein, contributes to the maintenance of normal bones and the development of muscle mass. In addition, several studies show the efficacy of Naticol® to promote mobility as we age (body strength and joint comfort) and to prevent the early signs of skin aging.

Why choose fish collagen?

- The most efficient source of protein
- Greenhouse gas emissions 7 times lower for fish farming than bovine farming
- Sustainable sources: fish from aquaculture, diverse species and geographical origins to limit environmental impact
- Fish products fit all religious and cultural preferences

Key applications

Naticol® preserves your physical capacities for sport performance

Sports nutrition represents a promising market. Professionals and amateurs alike, sportsmen and women from all backgrounds are looking at their diet. Naticol® proposes to accompany them in their quest for health and performance.

Naticol® is the ideal ingredient to guarantee performance and physical well-being before, during and after sports sessions.

Through various consumer panels, Naticol® has proven its effectiveness on sports performance.

Naticol® is good for your gut

Some individuals experience gut discomfort. In fact, digestive comfort has many effects on physical and mental health.

Naticol® Gut is a complementary and natural approach to microbiota balance. It is an ingredient composed of marine collagen peptides with specific markers, patented for its effect on intestinal well-being. The mechanisms of action and associated effects of Naticol® Gut are detailed in a scientific study published in the European Journal of Nutrition.

STRONG SUSTAINABILITY ENGAGEMENT

Aware of its responsibility as a major player in the collagen and gelatine industry, Weishardt is committed to improving processes at all levels of the company; we put sustainability at the heart of our decision-making process.

WEISHARDT, A FRENCH FAMILY COMPANY SINCE 1839

Based in France, Weishardt is one of the world's leading manufacturers of high quality gelatine for the food and pharmaceutical industries. With its innovative Naticol[®] brand, it is a major supplier in the area of marine collagen for health and beauty. The company's reputation is founded on demonstrating consistent quality and food safety throughout its 180 year history.

Weishardt carefully selects the raw material and enzyme mixture and uses a unique enzymatic hydrolysis process. This, along with strong purification processes, generates a peptide composition with targeted biological activity and optimal organoleptic properties, making Naticol[®] a pleasure to consume.
